As a Data Analyst on the Marketing Performance team, you are tasked with evaluating the effectiveness of our custom audience segments and lookalike audiences in driving user acquisition and conversions....

Question 1: How many total ad impressions did we receive from custom audience segments in October 2024?

```
SELECT
    SUM(p.impressions) AS total_ad_impression_from_custom_audience
FROM ad_performance AS p
LEFT JOIN audience_segments AS s
    ON p.audience_segment_id = s.audience_segment_id
WHERE p.date BETWEEN '2024-10-01' AND '2024-10-31'
    AND s.segment_name LIKE 'Custom Audience%';
```

Question 2: What is the total number of conversions we achieved from each custom audience segment in October 2024?

```
SELECT
    s.segment_name AS segment_name,
    SUM(p.conversions) AS total_ad_conversion_from_custom_audience
FROM ad_performance AS p
LEFT JOIN audience_segments AS s
    ON p.audience_segment_id = s.audience_segment_id
WHERE p.date BETWEEN '2024-10-01' AND '2024-10-31'
    AND s.segment_name LIKE 'Custom Audience%'
GROUP BY s.segment_name;
```

Question 3: For each custom audience or lookalike segment, calculate the cost per conversion. Only return this for segments that had non-zero spend and non-zero conversions. Cost per conversion = Total ad spend / Total number of conversions

```
SELECT
    s.segment_name AS segment_name,
    SUM(p.ad_spend) / SUM(p.conversions) AS cost_per_conversion
FROM ad_performance AS p
INNER JOIN audience_segments AS s
    ON p.audience_segment_id = s.audience_segment_id
WHERE (s.segment_name LIKE 'Custom Audience%' OR s.segment_name LIKE
'Lookalike Audience%')
GROUP BY s.segment_name
HAVING SUM(p.ad_spend) > 0
    AND SUM(p.conversions) > 0;
```
