You are a Product Analyst on the Uber Eats team investigating delivery partner performance....

Question 1: What is the percentage of orders delivered on time in January 2024? Consider an order on time if its `actual_delivery_time` is less than or equal to its `expected_delivery_time`. This will help us assess overall tracking precision.

```
SELECT
    (COUNT(CASE WHEN actual_delivery_time <= expected_delivery_time
THEN 1 END) * 100.0) / COUNT(*) AS per_orders_delivered_on_time
FROM
    fct_orders
WHERE
    order_date BETWEEN '2024-01-01' AND '2024-01-31';
```

Question 2: List the top 5 delivery partners in January 2024 ranked by the highest percentage of on-time deliveries. Use the `delivery_partner_name` field from the records. This will help us identify which partners perform best.

```
SELECT
    delivery_partner_name,
    (COUNT(CASE WHEN actual_delivery_time <= expected_delivery_time
THEN 1 END) * 100.0) / COUNT(*) AS per_orders_delivered_on_time
FROM fct_orders
WHERE order_date BETWEEN '2024-01-01' AND '2024-01-31'
GROUP BY delivery_partner_name
ORDER BY per_orders_delivered_on_time DESC
LIMIT 5;
```

Question 3: Identify the delivery partner(s) in January 2024 whose on-time delivery percentage is below 50%. Return their partner names in uppercase. We need to work with these delivery partners to improve their on-time delivery rates.

```
SELECT
    UPPER(delivery_partner_name),
    (COUNT(CASE WHEN actual_delivery_time <= expected_delivery_time
THEN 1 END) * 100.0) / COUNT(*) AS per_orders_delivered_on_time
FROM fct_orders
WHERE order_date BETWEEN '2024-01-01' AND '2024-01-31'
GROUP BY delivery_partner_name
HAVING per_orders_delivered_on_time <= 50;
```
